Artha

Government letters, made simple. In Kannada. By voice.

THE PROBLEM

Government notices often contain complex language, deadlines and instructions. For people with limited literacy or difficulty reading official Kannada, understanding what a letter says - and what to do next - can mean relying on someone else.

OUR SOLUTION

Artha is a Kannada-first AI assistant that lets people listen to and ask questions about their government letters. It turns a photographed or uploaded document into a clear Kannada explanation, then answers spoken questions using information from that document.

HOW IT WORKS

01 Upload: Add a letter as an image or PDF.

02 Understand: OCR extracts the text; Gemini produces a simple Kannada summary of key details, deadlines and required actions.

03 Listen: Gnani Timbre converts the summary into Kannada speech.

04 Ask: Speak a question in Kannada. Gnani Prisma transcribes it; Gemini answers from the extracted document, and Timbre can read the answer aloud.

WHY IT MATTERS

Artha aims to make essential information more accessible to people who struggle with reading or typing. By highlighting deadlines, documents and next steps - and supporting voice-based interaction - it could help users act with greater clarity and independence.

Built with: Streamlit | Google Cloud Vision OCR | Gemini | Gnani Prisma STT | Gnani Timbre TTS
Prototype note: Responses are grounded in extracted document text; users should verify critical information against the original notice.
